Overview

Open-drive screw compressors in the ATS range have been designed to guarantee reliability, flexibility and efficiency.

The range consists of 16 models, which not only offer a wide selection of capacities, but also a broad range of applications.

These compressors have been designed to work with ammonia, hydrocarbons, traditional HFC, HCFC and new low-GWP refrigerants. Moreover, they guarantee a high cooling capacity with and without an economizer.

Main applications include marine/industrial cooling, process cooling, heat pumps and air conditioning.

All models are designed to work in parallel combinations by way of an external oil separator.

Depending on the operating conditions, two main configurations can be identified to guarantee maximum efficiency:

ATSH: suitable for low compression ratios (medium-high evaporation temperature).

ATSL: suitable for high compression ratios (low evaporation temperature).

ASERCOM Performance Certificates

Frascold is a member of ASERCOM, the Association which ensures the accuracy and reliability of its compressors and that has set out the procedure for measuring the performance of compressors and their certification process. The certification of compressors certifies and guarantees that the published performance matches the performance measured with reference to European standard EN12900.

Additional information on www.asercom.org.

Product Selection Software FSS3

The FSS3 selection software, quick and easy to use, allows users to obtain the capacity in the various operating points and to access all technical information about Frascold compressors.

If you have any questions about how to use the software, we kindly ask that you contact customer service via email or phone. You can also send your comments and suggestions to improve the FSS3 software; your feedback is always welcome. Download the 'setup.exe' file on your computer, run it and follow the installation instructions. A link to the selection software will be created on your desktop to facilitate start-up.

Compressor capacity data

This brochure provides data relative to compressors with refrigerant R134a (GWP=1430), R404A (GWP=3922), R507A (GWP=3985), R22 (GWP=1810) and R717 (GWP=0). Data relative to other refrigerants is available on request.

The capacities are indicated with reference to European Standard EN12900 while operating at 50 Hz. To calculate capacities in different conditions and while operating at 60 Hz, use the Frascold Selection Software.

Operating limits

Compressors can be operated within the values indicated in the application envelope; pay attention to the different instructions for the different areas of the envelope.

The limits refer to compressor operation at maximum output and with a power frequency of 50 Hz.

The data sheets published in this catalogue must be considered as general for the entire range of compressors. Check the data sheet of each compressor model in the Frascold Selection Software.

Safety

Frascold compressors are produced in accordance with European safety standards. They can be used only if installed in systems that comply with operating instructions and current regulations. For relative standards, see the Manufacturer Declaration, which can be obtained by request or downloaded from the website www.frascold.it in the Download section.

They can only be run by skilled persons, suitably informed in regards to manufacturer declarations and able to understand and implement the contents of the installation manual supplied with the compressor or available on the website www.frascold.it.

Compressor protection

All compressors are supplied complete with an electronic module that manages the temperature sensor positioned on the delivery pipe, to control the discharge temperature.

Lubricating oil

The choice of oil depends on the properties, operating conditions, refrigerant used and the system's operating conditions. Oils different to those indicated below can be used. Special applications may require different viscosity/oil types; for said applications contact Frascold

Type of oil Frascold	Alternative oil	Base	Viscosity at 40°C in cSt	Refrigerant	Application
170POE	Emarkate RL170H or equivalent	POE	170	R134a / R404a / R507A	LT/MT/HT
46MIN-A 68MIN-A	Fuchs Reniso KS46 / KC68 or equivalent	M	46/68	R717	LT/MT/HT
68PAO-A	Mobil Gargoyle Arctic SHC226E, or equivalent	PAO	68	R717	LT/MT/HT
150POE	CPI CP 4214-150 or equivalent	POE	150	R22	HT
100AB	Mobil Zerice S100 or equivalent	AB	100	R22	LT/MT

POE: Polyester

M: Mineral

PAO: Polyalphaolefin

AB: Alkylbenzene

LT: Low temperature

MT: Medium temperature

HT: High temperature

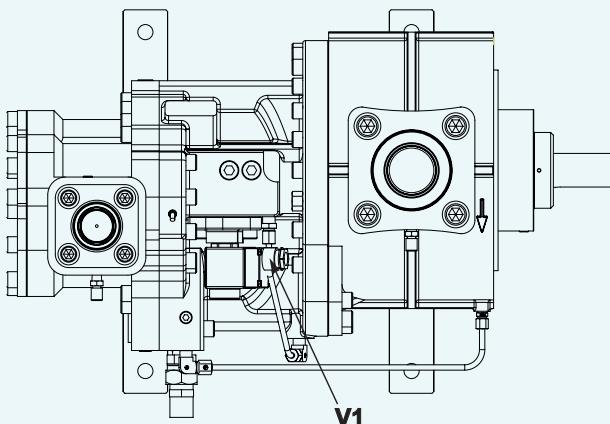

Capacity control

In reduced thermal load conditions, the compressor is able to bring the system being cooled to the design temperature in the shortest possible time; in this case, it is necessary to check if the increased number of compressor start-ups (resulting from a shorter cooling time) is compatible with the maximum number the compressor is able to withstand. The device used to control capacity, thus reducing the cooling capacity of the compressor, makes it possible to compensate this situation and prevent the efficiency of the entire cooling system from being compromised.

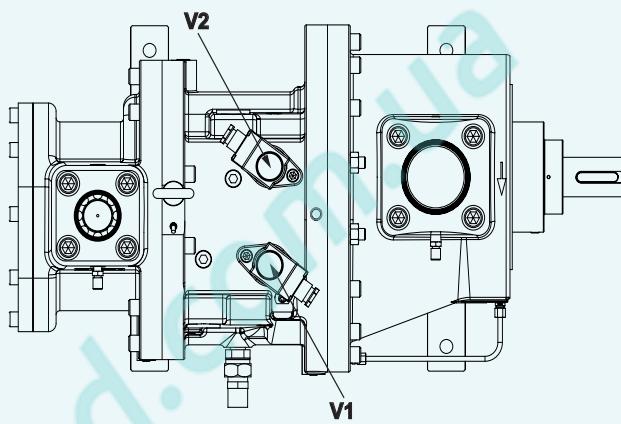

Capacity control can be executed using the following operating modes:

- Models 120-150: two-step (75-100%).
- Models 186-210-240-270-300-360: three-step (50-75-100%).

Capacity control is performed by way of a solenoid valve. The control sequence of the solenoid valve and the operating diagram are shown below.

ATSH1/L1 120 - 150

ATSH1/L1 186 - 210 - 240 - 270 - 300 - 360

Solenoid valve activation table

Type	Capacity control ①		
	At full load 100%	1. Step (75%)	2. Step (50%)
ATSH1/L1 120 - 150	V1 = ●	V1 = ○	-
ATSH1/L1 186 - 210 240 - 270 - 300 - 360	V1 = ● V2 = ●	V1 = ● V2 = ○	V1 = ○ V2 = ○

① The capacity steps are to be considered approximately 50% - 75%, based on the operating conditions.

Frascold Selection Software FSS3

Frascold has released the selection software FSS3, the new software dedicated to processes in the field of refrigeration, air conditioning and heat pumps. The software has been developed by a Frascold technical research and development team based on many years of experience in the production of compressors and their application in a range of systems, from the most simple to the most complex. Using FSS3, calculations are made based on the requirements specified by the user, or on standard operating conditions (EN12900), in order to select the right compressor and condensing unit. FSS3 completely replaces the previous FSS2 software, featuring additional new and important functions and applications. The software has a new graphic interface and is easier to use, makes precise calculations and offers flexibility in a broad range of functions.

Main features of FSS3

Simple to use and highly accurate, it offers users all the elements needed to select the compressor and condenser unit that best meets the design capacity and conditions::

- It provides performance reports on all products
- It allows reports to be exported in different formats, useful for printing and filing
- It displays the operating limits of all compressors and condenser units with all approved refrigerants
- Indispensable for contractors and designing engineers when developing and engineering complex plants
- It can be configured according to user needs
- It offers full support for the recalculation of performance coefficients in conditions different to the EN12900 standard
- It describes the technical features of the selected products (dimensional drawings, mechanical and electrical data, etc.)
- It is able to receive notifications each time a software update is available

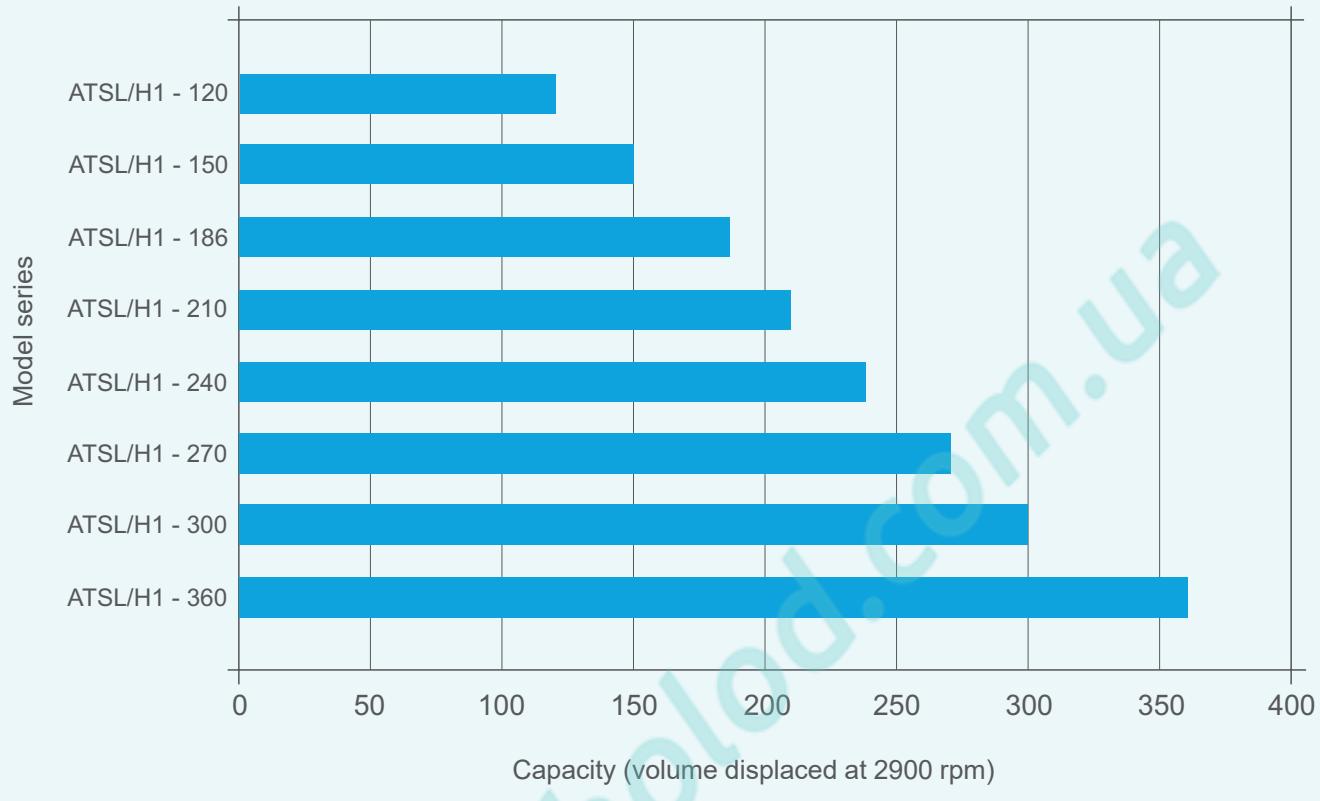

The selection software is available on our website www.frascold.it in the Software under the Download section. Download the executable FSS3 file on your computer, run it and follow the installation instructions. A link to the selection software will be created on your desktop to facilitate start-up.

If you have any questions regarding the software functions, please contact Frascold customer service via email or phone. You can also send your comments and suggestions to improve the FSS3 selection software; your feedback is always welcome.

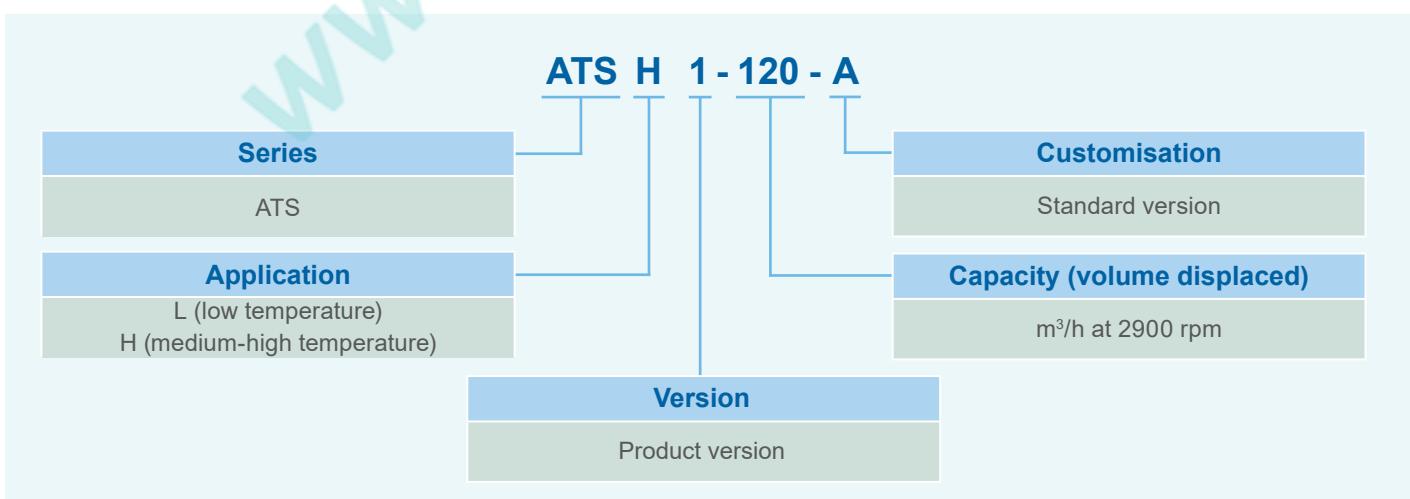

Model range

Current program:

8 main sizes, 16 models with 8 displacements from 120 to 360 m³/h (2900 rpm)

Model nomenclature

Special characteristics

Easy installation and accessibility: Compact design with reduced overall dimensions and easy installation.

High precision: Bearings with high degree of rigidity and operating precision, resistant against radial and axial load combination, compatible in operation with R717 (NH3). Their innovative configuration protects the screws against any counter-rotations that may occur during system shut down.

High flexibility: Universal application: R134a, R404A, R507A, R407C, R22 and R717 (NH3). Set up for operation with economizer.

High performance: Profile with asymmetrical screws and optimised dimensions to guarantee high performance.

Coupling: Direct coupling with motor

Noise level: Low noise level and no vibrations.

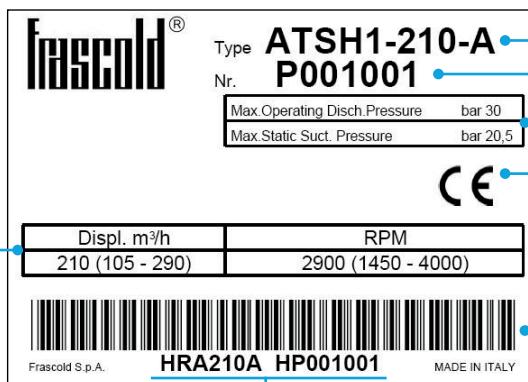

Long duration operational life: Special bearings have been designed with a cage that helps reduce noise levels and increase the load coefficient and their operating life.

Maintenance: Mechanics designed for safe operation with long periods of minimal maintenance.

Information plate

All important information for the compressor's identification is printed on the plate. The production date is included in the serial number. The installer is responsible for indicating the type of refrigerant.

▲ Optional accessory

Oil injection kit

The oil injection kit (optional) includes:

- Oil filter (3)
- Flow switch with electronic control module (4)
- Solenoid valve (5)
- Sight glass (6)

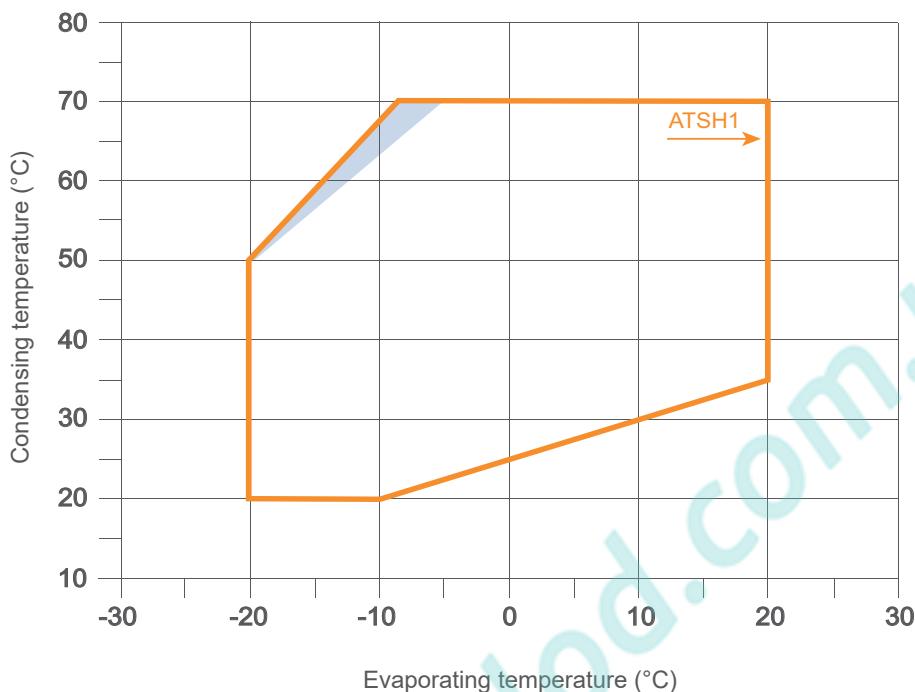

1	Remote oil separator
2	Discharge line
3	Oil filter
4	Oil flow switch
5	Oil line solenoid valve
6	Sight glass
7	Check valve
8	Discharge pressure regulation valve
9	External equalization line
10	Shut-off valve
11	Solenoid valve
12	Electric motor (standard motor not supplied by Frascold)
13	Oil cooler
14	Oil return line
15	Suction line
16	Compressor

Operating limits

The compressor can be operated within the values of the application chart; pay attention to the different zones.

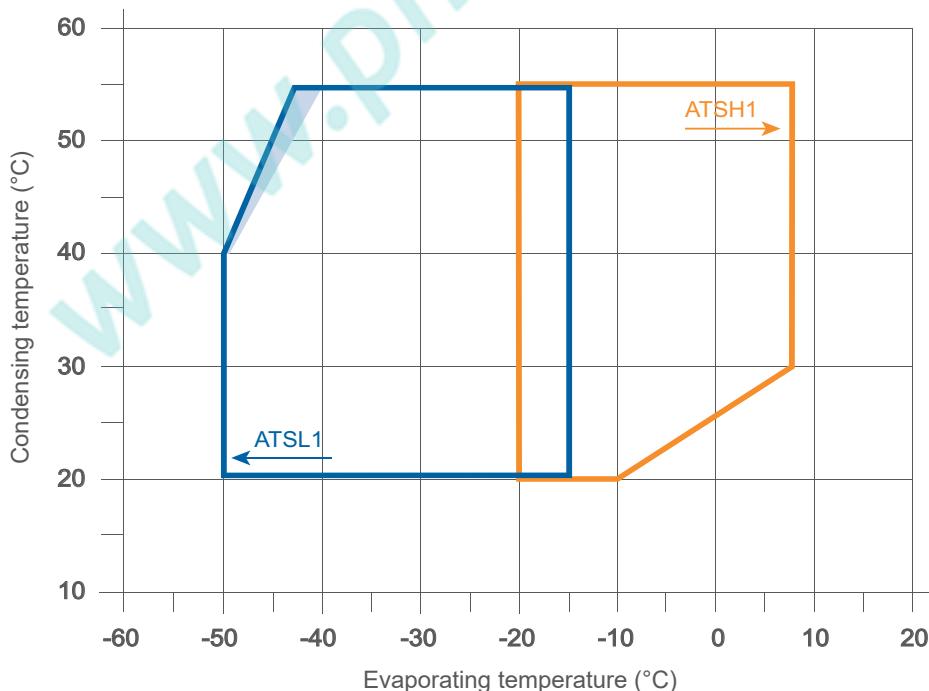

R134a

Standard application envelope

① Superheat of suction gas 10 K without liquid sub-cooling.

Performance values refer to European Standard EN12900 with operation at 2900 rpm

To calculate performance in different operating points, see Frascold Selection Software.

All published data is preliminary and susceptible to change.

In this range, supplementary cooling is necessary, or alternatively the suction temperature must be limited.

Performance R404A - R507A [50 Hz] medium-high temperature

① Superheat of suction gas 10 K without liquid sub-cooling.

Performance values refer to European Standard EN12900 with operation at 2900 rpm

To calculate performance in different operating points, see Frascold Selection Software.

All published data is preliminary and susceptible to change.

In this range, supplementary cooling is necessary, or alternatively the suction temperature must be limited.

① Superheat of suction gas 10 K without liquid sub-cooling.

Performance values refer to European Standard EN12900 with operation at 2900 rpm

To calculate performance in different operating points, see Frascold Selection Software.

All published data is preliminary and susceptible to change.

 In this range, supplementary cooling is necessary, or alternatively the suction temperature must be limited.

① Superheat of suction gas 10 K without liquid sub-cooling.

Performance values refer to European Standard EN12900 with operation at 2900 rpm

To calculate performance in different operating points, see Frascold Selection Software.

All published data is preliminary and susceptible to change.

 In this range, supplementary cooling is necessary, or alternatively the suction temperature must be limited.

To calculate performance in different operating points, see Frascold Selection Software.

All published data is preliminary and susceptible to change.

In this range, supplementary cooling is necessary, or alternatively the suction temperature must be limited.

Dimensional drawings and connections

Models ATSH1/L1 - 120
ATSH1/L1 - 150

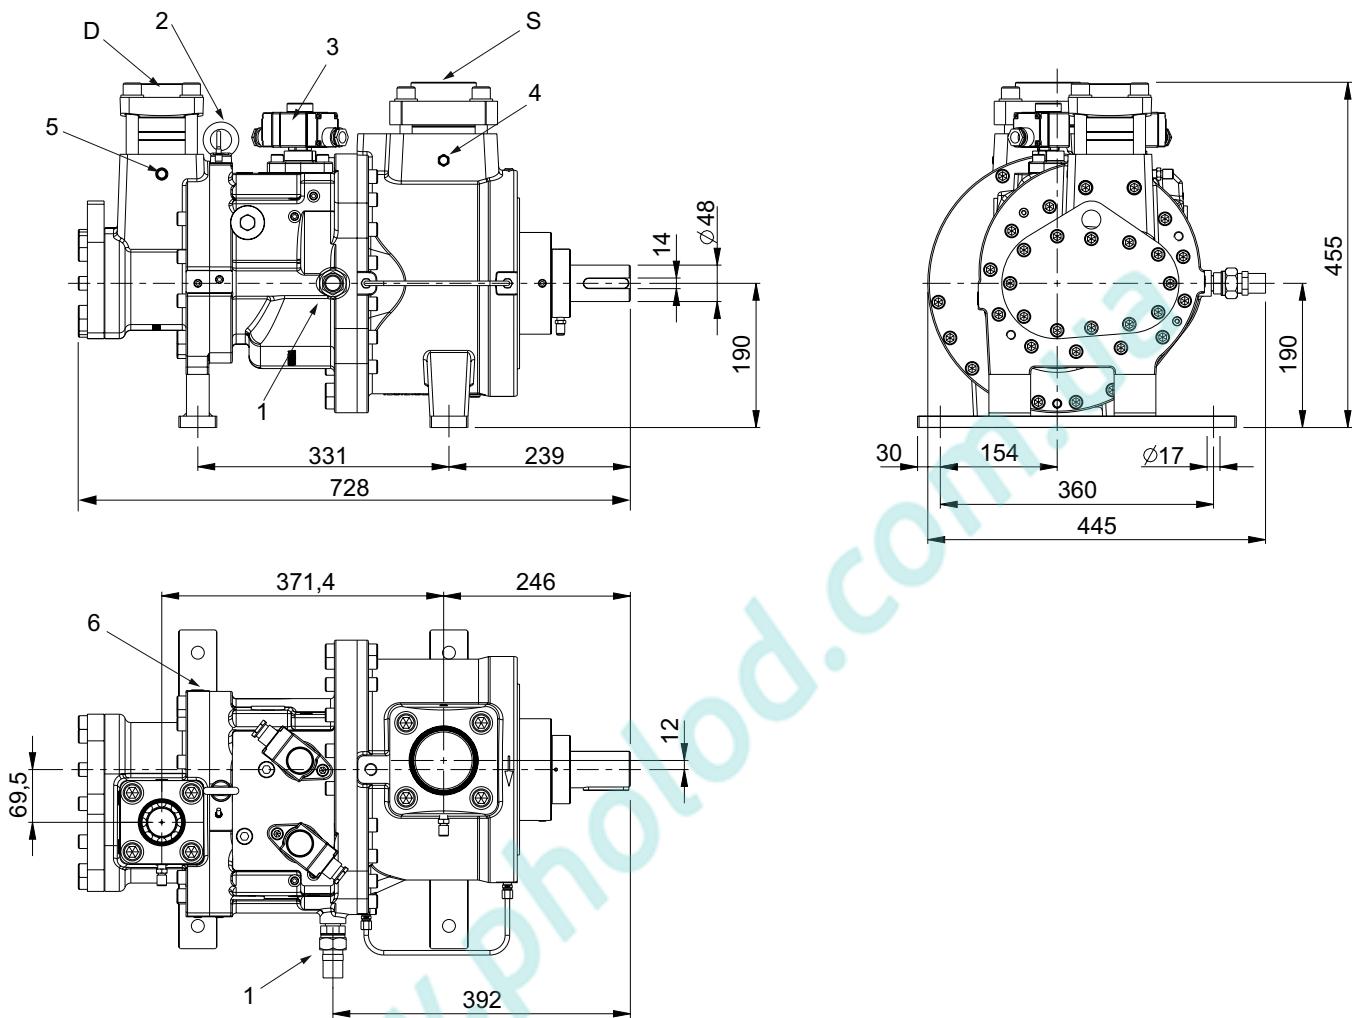

1	Oil return connection line	Ø 7/8"	22,0 mm
2	Discharge temperature sensor		
3	Capacity control valve		
4	Low pressure connection		
5	High pressure connection		
6	Liquid injection / economiser connection	Ø 2" 5/8	54,0 mm
S	Suction	Ø 1" 5/8 (1)	42,0 mm
D	Discharge		

(1) Inch connection on request

Dimensional drawings and connections

Models **ATSH1/L1 - 186**
ATSH1/L1 - 210

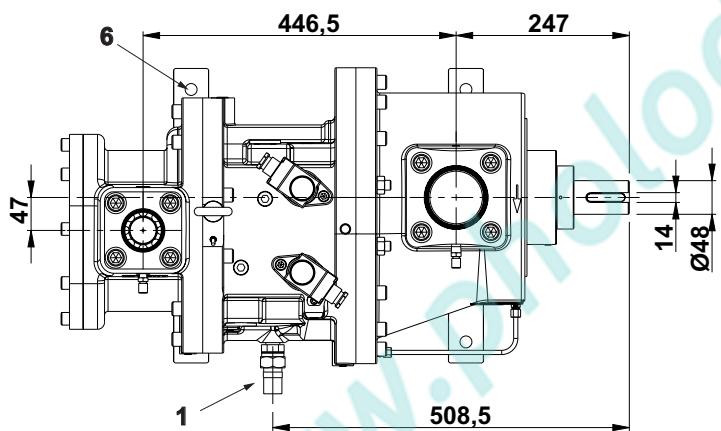

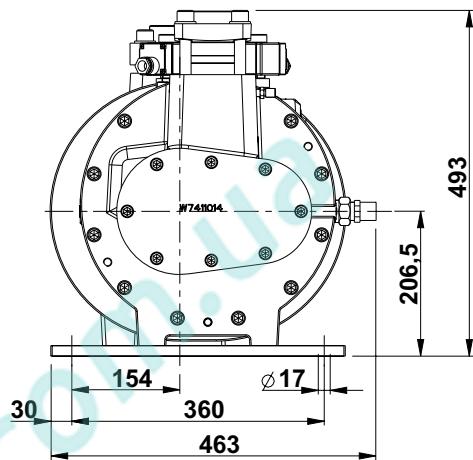

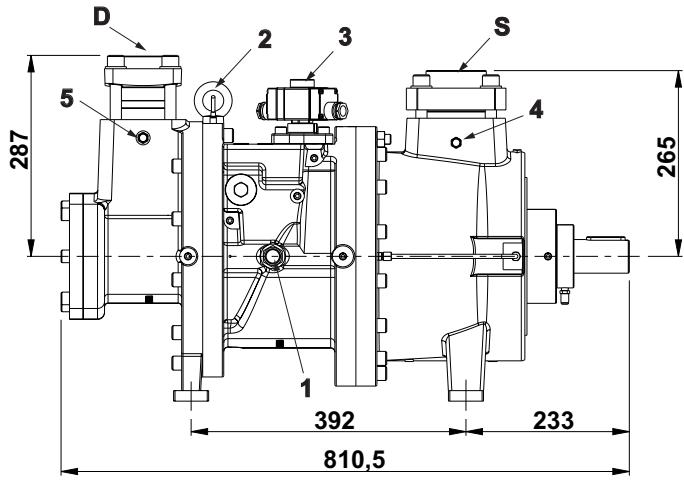

1	Oil return connection line	$\varnothing \frac{7}{8}''$	22,0 mm
2	Discharge temperature sensor		
3	Capacity control valve		
4	Low pressure connection		
5	High pressure connection		
6	Liquid injection / economiser connection	$\varnothing 3\frac{1}{8}''$ (1)	80,0 mm
S	Suction		
D	Discharge	$\varnothing 2\frac{1}{8}''$	54,0 mm

(¹) Inch connection on request

Dimensional drawings and connections

Models ATSH1/L1 - 240
ATSH1/L1 - 270

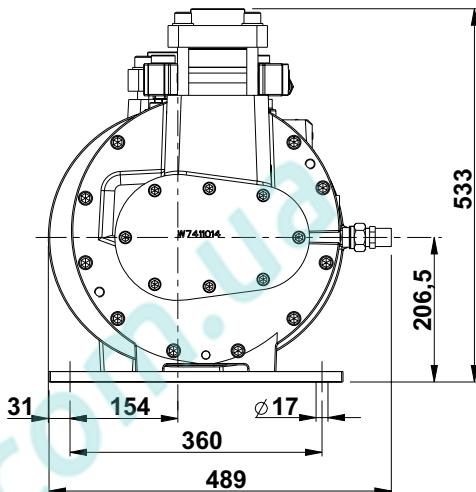

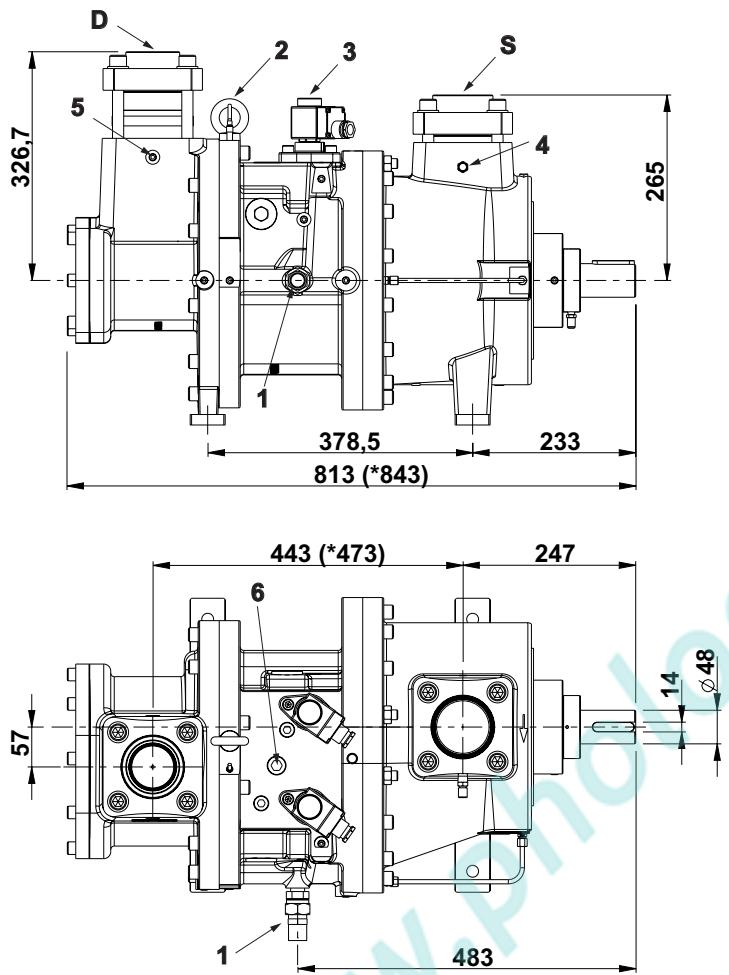

1	Oil return connection line	$\varnothing \frac{7}{8}''$	22,0 mm
2	Discharge temperature sensor		
3	Capacity control valve		
4	Low pressure connection		
5	High pressure connection		
6	Liquid injection / economiser connection	$\varnothing 3'' \frac{1}{8}''$ (*)	80,0 mm
S	Suction	$\varnothing 2'' \frac{1}{8}''$	54,0 mm
D	Discharge		

(*) Inch connection on request

Dimensional drawings and connections

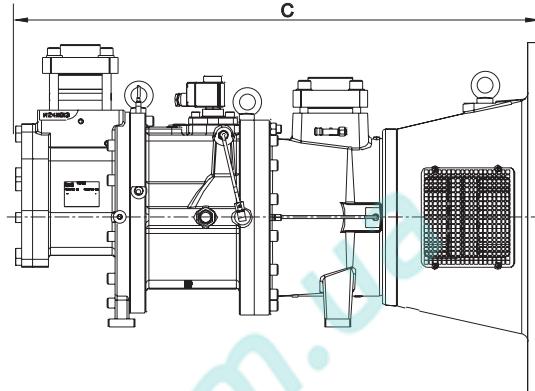

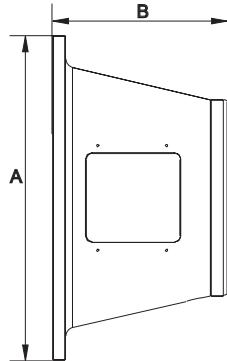

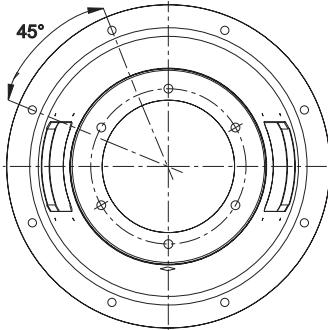

Models ATSH1/L1 - 300
ATSH1/L1 - 360*

1	Oil return connection line	$\varnothing \frac{7}{8}''$	22,0 mm
2	Discharge temperature sensor		
3	Capacity control valve		
4	Low pressure connection		
5	High pressure connection		
6	Liquid injection / economiser connection	$\varnothing 3 \frac{1}{8}''$ (*)	80,0 mm
S	Suction	$\varnothing 2 \frac{5}{8}''$ (*)	67,0 mm
D	Discharge		

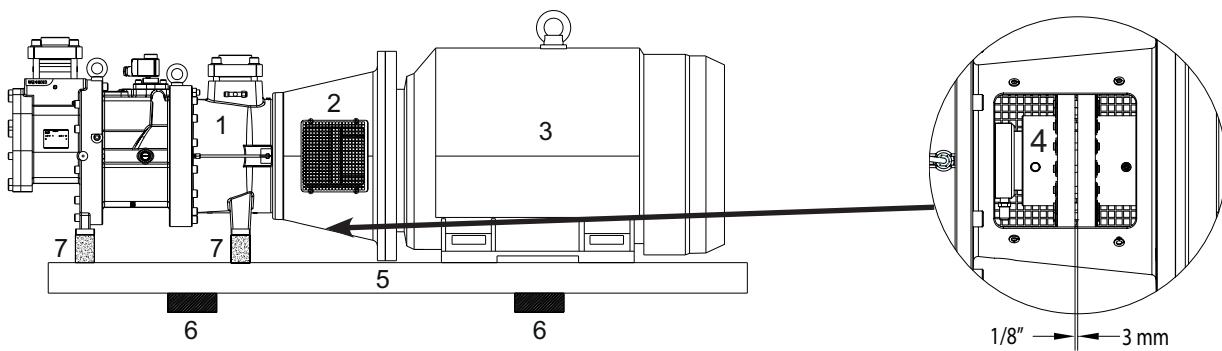

(*) Inch connection on request
